“Terrace Waterproofing ki Jodi”

Product Details

- **KABU SHED:**
Kabu Shed is a acrylic co-polymer made for waterproof coatings on multiple surfaces.
[DOWNLOAD TDS](#)
- **KABU HEATPROOF:**
Kabu Heatproof is a acrylic based UV protective polymer with high elongation to provide waterproofing and heatproofing together when applied over multiple surfaces.
[DOWNLOAD TDS](#)

Area on which it can be applied:

- Concrete surfaces horizontal / vertical.
- Cement sheets / Metal roofs / etc.

What type of waterproofing can be done with this application:

- Only positive waterproofing can be done with this application.
- This can be applied on any exterior surfaces.

DIY (Do it yourself) Application Process:

- Wash the surface with water jet spray to clean all loose particles and dust. This pressure also opens up hairline cracks on the surface.
- Check all loose pockets on the surface. If you find any loose pockets then treat them well by replacing with new PCC / plaster / etc.
- Make the surface ready in level and smooth for waterproofing.
- Then take the grinder and open all the cracks in V groove shape.
- Make the paste of KABU SHED and Cement (without adding any water) and fill the cracks. Allow the cracks to dry for a day.
- Start the waterproofing application as mentioned below:
 - Apply 1st coat of KABU SHED by mixing KABU SHED with Cement (White / Grey) in the ratio 1 part of SHED: 1.25 Cement) and apply on the surface with brush or roller. Allow it to dry for 3 to 4 hours completely.
 - Apply 2nd coat of KABU Heatproof by mixing 20% water in the chemical. Apply with clean brush / roller allow it to dry to 3 to 4 hours.
 - Apply 3rd coat in perpendicular direction of 2nd coat with KABU Heatproof directly without mixing any water or any other substance. Allow it to dry for 3 to 4 hours.
 - Once your process is complete then allow the surface to dry completely for around 2 days.
 - You can take the water leakage test by doing water ponding test by filling water up to 1 to 2 inches on the surface and allow it to stay for maximum up to 48 hours.
 - If you observe any leakage from below the surface then repeat the application only over the leakage area.
